STEREO AMPLIFIER

A-60

MODEL A-60 COMES IN FIVE VERSIONS DISTINGUISHED AS FOLLOWS:

Type	Voltage	Remarks
KU	AC120V only	U.S.A. model
HE	AC220V, 240V (Switchable)	European continent model
HB	AC220V, 240V (Switchable)	United Kingdom model
YP	AC240V only	Australia model
HEZ	AC220V, 240V (Switchable)	West Germany model
S	AC110V, 120V, 220V, 240V (switchable)	General export model

- This service manual is applicable to the KU type. For servicing of the HE, HB, YP and S types, please refer to the pp. 27~29. For servicing of the HEZ type, please refer to the additional service manual.
- Ce manuel d'instruction se réfère au mode de réglage, en français.
- Este manual de servicio trata del método de ajuste escrito en español.

1. SAFETY INFORMATION

1. SAFETY PRECAUTIONS

The following check should be performed for the continued protection of the customer and service technician.

LEAKAGE CURRENT CHECK

Measure leakage current to a known earth ground (water pipe, conduit, etc.) by connecting a leakage current tester such as Simpson Model 229-2 or equivalent between the earth ground and all exposed metal parts of the appliance (input/output terminals, screwheads, metal overlays, control shaft, etc.). Plug the AC line cord of the appliance directly into a 120V AC 60Hz outlet and turn the AC power switch on. Any current measured must not exceed 0.5mA.

AC Leakage Test

ANY MEASUREMENTS NOT WITHIN THE LIMITS OUTLINED ABOVE ARE INDICATIVE OF A POTENTIAL SHOCK HAZARD AND MUST BE CORRECTED BEFORE RETURNING THE APPLIANCE TO THE CUSTOMER.

2. PRODUCT SAFETY NOTICE

Many electrical and mechanical parts in the appliance have special safety related characteristics. These are often not evident from visual inspection nor the protection afforded by them necessarily can be obtained by using replacement components rated for voltage, wattage, etc. Replacement parts which have these special safety characteristics are identified in this Service Manual.

Electrical components having such features are identified by marking with a Δ on the schematics and on the parts list in this Service Manual.

The use of a substitute replacement component which does not have the same safety characteristics as the PIONEER recommended replacement one, shown in the parts list in this Service Manual, may create shock, fire, or other hazards.

Product Safety is continuously under review and new instructions are issued from time to time. For the latest information, always consult the current PIONEER Service Manual. A subscription to, or additional copies of, PIONEER Service Manual may be obtained at a nominal charge from PIONEER.

2. SPECIFICATIONS

Amplifier Section

Continuous average power output is 100 watts* per channel, min. at 8 ohms from 20 hertz to 20,000 hertz with no more than 0.007% total harmonic distortion**.

Continuous Power Output at 1 kHz (both channels driven)

T.H.D. 0.007%, 8 ohms 120 watts per channel
 T.H.D. 1%, 8 ohms 130 watts per channel (DIN)
 Damping Factor (20 hertz to 20,000 hertz, 8 ohms) 60

Input (Sensitivity/Impedance)

PHONO MM 2.5 mV/50 kilohms
 PHONO MC 0.2 mV/100 ohms
 TUNER, CD/AUX, TAPE PLAY 1, 2 150 mV/50 kilohms

Phono Overload Level (T.H.D. 0.005%, 1,000 Hz)

PHONO MM 200 mV
 PHONO MC 17 mV

Output (Level/Impedance)

TAPE REC 1, 2 150 mV/2.2 kilohms

Frequency Response

PHONO MM (RIAA Equalization) 20 Hz to
 20,000 Hz ± 0.2 dB
 TUNER, CD/AUX, TAPE PLAY 1, 2 5 Hz to
 100,000 Hz ± 3 dB

Tone Control

BASS ± 10 dB (100 Hz)
 TREBLE ± 10 dB (10 kHz)

Filter

LOW (SUBSONIC) 15 Hz (-6 dB/oct)
 Loudness Contour (Volume control set at -40 dB)
 +6 dB (100 Hz), +3 dB (10 kHz)

Hum and Noise (IHF, short circuited, A network)

PHONO MM 86 dB (2.5 mV)
 PHONO MC 70 dB (0.25 mV)
 TUNER, CD/AUX, TAPE PLAY 1, 2 105 dB (150 mV)

Hum and Noise (DIN, continuous power/50 mW)

PHONO MM 74/61 dB
 TUNER, CD/AUX, TAPE PLAY 1, 2 88/62 dB

Miscellaneous

Power Requirements KU model; AC 120 V, 60 Hz
 HB, YP models; a.c. 240 Volts~, 50 Hz
 HE model; a.c. 220 Volts~, 50 Hz
 S model; 110/120/220/240 V (switchable), 50/60 Hz
 Power Consumption KU model; 170 W (UL)
 HE, HB, YP models; 700 W (max.)
 S model; 220 W
 Dimensions 420 (W) \times 130 (H) \times 331 (D) mm max.
 16-9/16 (W) \times 5-3/16 (H) \times 13-1/16 (D) in.
 Weight (without package) 9.4 kg (20 lb 12 oz)

Furnished Parts

Operating Instructions 1

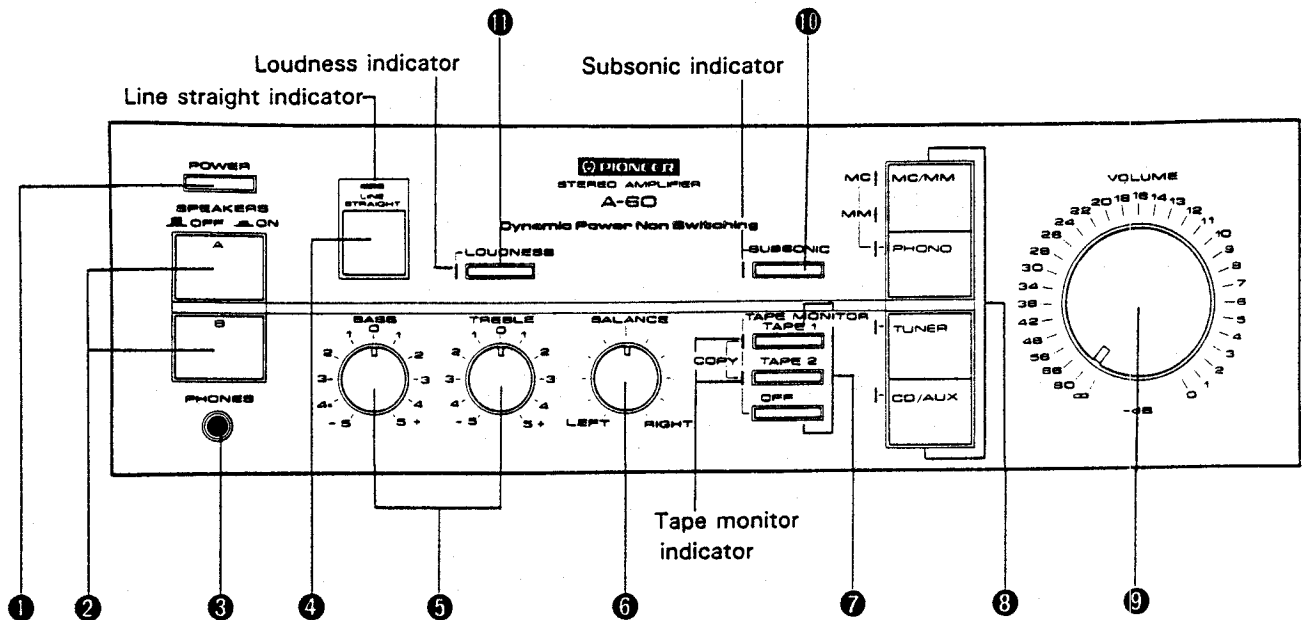

* Measured pursuant to the Federal Trade Commission's Trade Regulation rule on Power Output Claims for Amplifier.

** Measured by Audio Spectrum Analyzer.

NOTE:

Specifications and design subject to possible modification without notice due to improvements.

3. FRONT PANEL FACILITIES

1 POWER SWITCH

Power is supplied to the stereo amplifier when the switch is depressed. When the switch is released, the power is turned off.

2 SPEAKER SWITCHES

Two sets of speakers can be used. Depress the switches to turn ON. Release to turn OFF.
 A Sound is heard from the speakers connected to the Speaker A terminals.
 B Sound is heard from the speakers connected to the Speaker B terminals.

- Speakers A and B can also be used simultaneously. If using both, depress both Speaker A and B switches.

NOTE:
 When only one set of speakers is used, the impedance is different from that obtained when two sets are used.

3 PHONES JACK

Connect the plug on your headphones to this jack. To listen to a program through the headphones, turn both the SPEAKER A and B switches to OFF position.

4 LINE STRAIGHT SWITCH

When the switch is depressed to the ON position, (the Line Straight indicator lights up) the signal from the input jacks is sent directly to the power amplifier, without passing through the tone control circuit or the loudness circuit, and consequently a flat frequency is obtained.

5 TONE QUALITY (BASS AND TREBLE) CONTROLS

The controls can be adjusted when the LINE STRAIGHT switch is set to OFF position. (The Line Straight indicator turns off)

BASS CONTROL Adjusts the quality of the Bass (Low frequency range) sound.
 When the control is turned counter-clockwise from the central "0" position, the bass is attenuated. When turned clockwise, the bass is stressed.

TREBLE CONTROL .. Adjusts the treble (high frequency) sound.
 When the control is turned counter-clockwise from the central "0" position, the treble is attenuated, when turned clockwise, the treble is stressed.

6 BALANCE CONTROL

This control is used to balance the volume of the left and right channels. If the sound appears to be weaker from the right speaker, turn the BALANCE control clockwise (↻). If the sound is weaker from the left speaker, turn the control counter-clockwise (↺).

7 TAPE MONITOR SWITCHES

Used when playing back a tape or monitoring a recording. The stereo amplifier has tape jacks for 2 systems. Recording and playback are possible with 2 tape decks connected. Furthermore, both simultaneous recording using both tape decks or copying from one tape to another are possible.

TAPE 1 Depress this switch when playing back a tape or monitoring a recording on the tape deck attached to TAPE 1 jack on the rear panel.

Also, depress this switch when copying a tape from the tape deck attached to TAPE 1 jack to the tape deck attached to TAPE 2 jack on the rear panel.

TAPE 2 Depress this switch when playing back a tape or monitoring a recording on the tape deck attached to TAPE 2 jack on the rear panel.

OFF Leave in OFF normally.

8 FUNCTION SWITCHES

These switches select the program source. A function indicator is attached to the left side of each FUNCTION switch. When pressed, the indicator lights up.

MC/MM When playing a record on the turntable, adjust the switch to correspond to the cartridge being used. Confirmed by the MC or MM indicator that lights up.

PHONO Depress for playing records on a turntable connected to the PHONO jack on the rear panel.

TUNER Depress for listening to a program on a tuner connected to the TUNER jacks on the rear panel.

CD/AUX Depress for listening to the sound from a stereo component connected to the CD/AUX jacks on the rear panel. (for eg. Compact Disk Player or TV tuner, which can be bought separately).

NOTE:

Since the TAPE MONITOR switches have priority over the FUNCTION switches, turn the TAPE MONITOR switches to OFF.

9 VOLUME CONTROL

This is used to adjust the volume of sound heard through the speakers or headphones. No sound is heard when the control is at the "∞" position. To increase the volume, turn the control slowly clockwise (↻).

10 SUBSONIC SWITCH

When this switch is depressed, the Subsonic Filter indicator lights up and the subsonic filter is activated. The filter serves to attenuate frequencies lower than 15 Hz with a 6 dB/oct slope, and can therefore be used to suppress the ultra low range noise, generated by record warp. This noise cannot actually be heard by the ear, but it can cause intermodulation distortion and even speaker damage. Use the switch as required during record play.

11 LOUDNESS SWITCH

Depress this switch under low volume listening conditions. The Loudness indicator lights up and the bass and treble sound is emphasised.

When the volume of sound is low, the capability of the ear to pick up the bass and treble sound drops off, compared with high volume listening conditions. The loudness circuit compensates for this characteristic of the ear. The bass and treble are emphasised when the switch is set to ON and the sound comes alive, even when the volume is low.

NOTE:

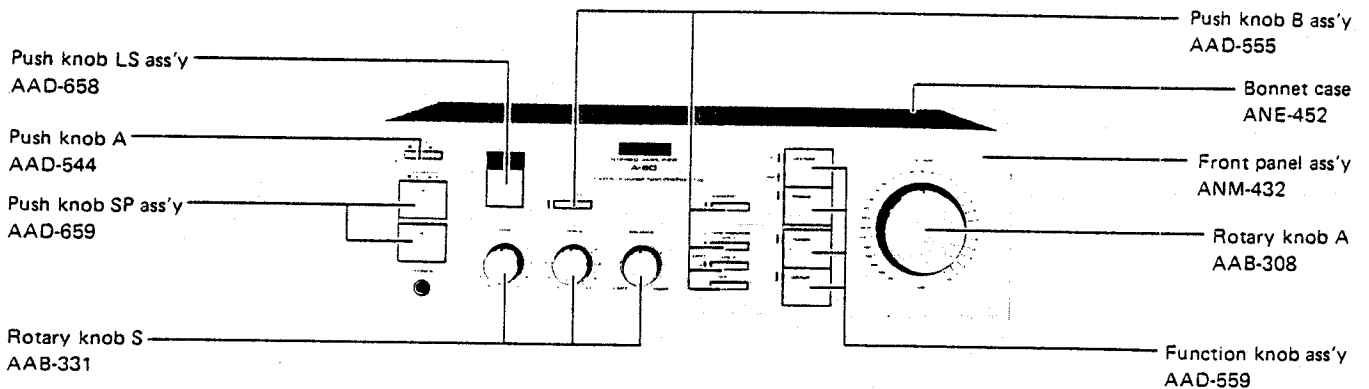

The LOUDNESS switch does not operate if the LINE STRAIGHT switch is ON.

7. CIRCUIT DESCRIPTIONS

DYNAMIC POWER SUPPLY CIRCUIT

The dynamic power supply system featured in the final stage of the A-60 power amplifier varies the voltage applied to the power transistor in accordance to the signal level. The result is reduced heat loss and higher efficiency.

Operating Principles

The basic circuitry is outlined in Fig. 7-1. There are two V_H and V_L power lines. The signal output v_o is compared with final stage power voltage v_a by differentiator, v_a being obtained by controlling V_H . With the v_a input applied to the differentiator being offset by E_s (several volts), the v_a waveform is traced, v_a being several volts larger than v_o . If, however, v_o is less than $V_L - E_s$, v_a is fixed at the V_L level (see Fig. 7-2).

The purpose of the high-region ON circuit is to avoid irregularities from occurring where v_a can no longer follow v_o at high signal frequencies, and to prevent high-speed continuous operation in the control transistor. That is, when high frequency signals appear at the output, the control transistors (Q3 and Q4) are turned fully on, and v_a is fixed at the V_H level.

A-60 Dynamic Power Supply Circuit

The overall circuit structure is outlined in Fig. 7-3. V_L is fixed so as to obtain the rated output (about 75W) for a 4Ω load, and the high region ON circuit is designed to operate at frequencies above 3kHz. The SPEAKER IMPEDANCE switch set to the $4\Omega \sim 6\Omega$ position fixes the power supply to the final stage transistor at the V_L level.

10. ELECTRICAL PARTS LIST

NOTES:

- When ordering resistors, first convert resistance values into code form as shown in the following examples.

Ex. 1 When there are 2 effective digits (any digit apart from 0), such as 560 ohm and 47k ohm (tolerance is shown by J = 5%, and K = 10%).

560Ω	56 x 10 ¹	561	RD½PS	561 J
47kΩ	47 x 10 ³	473	RD½PS	473 J
0.5Ω	0R5		RN2H	0R5 K
1Ω	010		RS1P	010 K

Ex. 2 When there are 3 effective digits (such as in high precision metal film resistors).

5.62kΩ	562 x 100	5621	RN½SR	5621 F
--------	-----------	------	-------	--------

- The Δ mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.
- For your Parts Stock Control, the fast moving items are indicated with the marks **★★** and *****.
★★ GENERALLY MOVES FASTER THAN *
This classification shall be adjusted by each distributor because it depends on model number, temperature, humidity, etc.

12. ADJUSTMENTS

Idle Current Adjustment

- Turn VR1 (L) and VR2 (R) fully around in the counter-clockwise direction.
- Without any load or input signal, turn POWER switch ON and let stand for 10 minutes.

Adjustment point	Prescribed value	Measuring terminal
VR1 (L)	0.5mV~5mV	TP1 (+) and No. 25
VR2 (R)	0.5mV~5mV	TP2 (+) and No. 26

12. RÉGLAGE

Réglage du courant déwatté

- Tourner à fond VR1 (L, gauche) et VR2 (R, droite) en sens inverse des aiguilles d'une montre.
- Sans charge ni signal d'entrée, allumer l'interrupteur POWER et le maintenir 10 minutes.

Point de réglage	Valeur prescrite	Terminal de mesure
VR1 (L)	0,5mV~5mV	TP1 (+) et N° 25
VR2 (R)	0,5mV~5mV	TP2 (+) et N° 26

For Service Manuals Contact
MAURITRON TECHNICAL SERVICES
 8 Cherry Tree Rd, Chinnor
 Oxon OX9 4QY
 Tel: 01844-351694 Fax: 01844-352554
 Email: enquiries@mauritron.co.uk

12. AJUSTE

Ajuste de la corriente la corriente devatiada

- Girar la VR1 (L, izquierda) VR2 (R, derecha) totalmente en la dirección hacia la izquierda.
- Sin ninguna carga o señal de entrada, girar el interruptor de la alimentación (POWER) a ON y manténgalo por 10 minutos.

Punto de ajuste	Valor determinado	Terminal de medida
VR1 (L)	0,5mV~5mV	TP1 (+) y no. 25
VR2 (R)	0,5mV~5mV	TP2 (+) y no 26

13. FOR HE, HB AND YP TYPES

The HE, HB, and YP types are the same as the KU type with the exception of the following sections.

Contrast of Miscellaneous Parts

Line Voltage Selection

Line voltage can be changed with following steps.

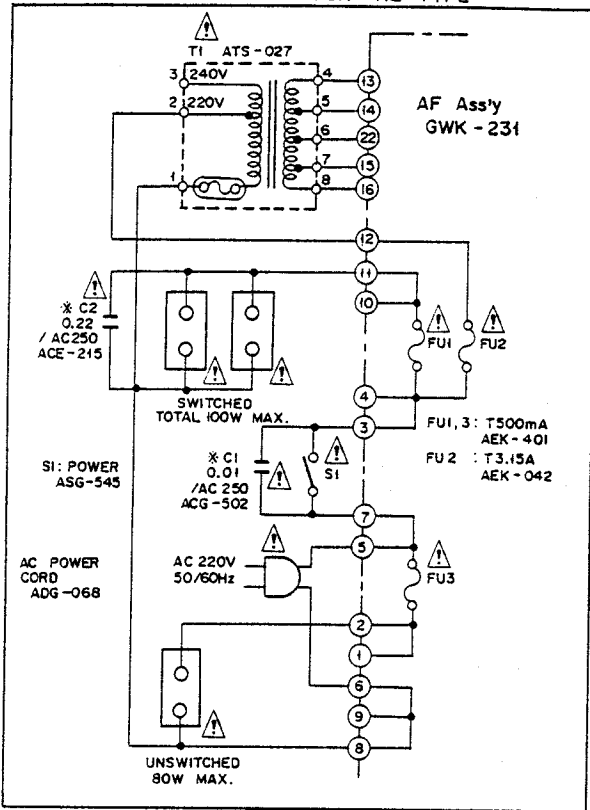

1. Disconnect the AC power cord.
2. Remove the top cover.
3. Change the connection of the power transformer primary taps.
4. Stick the line voltage label on the rear panel.

Part No.	Description
AAX-193	220V label
AAX-192	240V label
